the 1990s, the number of people in the UK who are aged 65 and over has increased from 10.5 million to 13.5 million (13.5% of the population).

There is a growing awareness of the need to address the health care needs of the elderly population. The Department of Health (1998) has set out a strategy for the care of the elderly, and the Health Service Research Unit (1998) has produced a research agenda for the care of the elderly. The research agenda includes a number of key areas, including the need to improve the quality of care for the elderly, to reduce inequalities in health care, and to address the needs of the elderly population in the community.
